Bi-Fold Folding Glass Wall & Doors Systems offer premium aluminum construction, visual elegance and the high-end form and function you want for your home. Whether your project is remodeling, or a new construction, Bi-Fold Folding Glass doors will add beauty and value to your home.

Open your home up to beautiful views, allow the nice weather indoors, enhance airflow, or entertain guests in an open environment between your outdoor patio and the interior of your home. Create an open floorplan to instantly enhance the way you feel in your home. When opened, the panes can be conveniently folded up outside to maximize the living space, or inside to blur the visible boundary when looking from outside. The applications are limited by your imagination, and no goal is beyond reach.

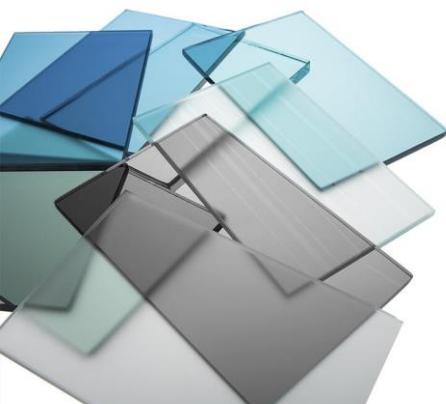

Bi-Fold systems come with energy-conserving glass that lets the light through, but keeps the warmth inside and the cold outside.

Our customers are able to pick from a comprehensive selection of handles and other hardware suitable for any architectural style and personal preferences.

Bi-fold systems offers a wide range of glass options for any style and purpose:

Tinted glass,
Tempered,
Laminated,
as well as
Single,
Dual, and
Triple
pane glass for
extra security.
